

Virtual Private Server

A Virtual Private Server (VPS) gives you more power and flexibility to build your server the way you want.

Canadian Web Hosting offers three unique VPS platforms Xen, Hyper-V and VMware that are built to give you flexibility in your choice of virtualization platform and deliver an Enterprise-Grade solution without the cost of owning your own hardware.

With every VPS, you get advanced features like high availability, automatic failover and 100% redundancy without the need to invest in expensive hardware or IT management. You have your choice of virtualization including our enterprise-grade VMware servers that include automated daily backups and server management. With Hyper-V, you can lower your Windows costs, and benefit from advanced features like Distributed Resource Scheduling and Live Migration.

Service Comparison

	Shared Hosting	Virtual Private Servers
Rapid Deployment	★	★
Fully Customizable	★	★
Linux or Windows	★	★
Compliance & Security		★
Multi-Platform		★
Fully Managed		★
Root Access		★
